www.bio-misuses.info

Dear Madam, Dear Sir,

I write to inform you about widespread misuses of modern bio-technologies by the intelligence agencies of today's major powers and in counteraction of worldwide operating defence leagues and a coalition of Third World Countries.

The US CIA investigated from the beginning of the 50ies in its bio-chemical laboratories systematically poisons for their incisive effects on the human body, naturally found venoms and synthesized toxins, drawing also on exotic plants and animals, voodoo rites, pseudo-medical experiments in Nazi concentration camps. They scaled up their R&D efforts rapidly from that period on and synthesized new classes of toxins in concurrence with development of biological and chemical weapons by the US Military and NATO. In one project they started research into the anatomy and physiology of the central and peripheral nervous systems, in goal and method of depravity, to manipulate the bio-chemical-electrical processes, determining ethical, social, intellectual, motivational, emotional and sexual behavior. Another project initiated research into the structures and mechanisms of the human genome, in intentional misapplication of mutagenic-, hybridization- and recombinant DNA technologies to cause with bio-technological incisions into the genotype changes in the phenotype, manipulating the common gene pool and also plant and animal life. As goal has been set up the construction of the first 'biological bomb', with application for example in high tech terror, clandestine, large scale use of bio-chemical, physiology and genome affecting toxins on dissident groups. The present state of the art technology with a program of systematic depot pellet poisoning manipulates political-psychological profiles population wide of millions of people of all groups of society.

Several larger, private parties and independent defence leagues have escalated their investigations into the security agencies of the Western Atomic Powers and NATO, of Russia, Japan, Germany, Israel, Saudi Arabia and larger Third World Countries into a global dirty war between all existing and new forming groups. A majority of Third World Countries formed its own coalition with a network of high tech power centers. Together they operate today an almost gapless worldwide system of labor camps:

- 1) They operate extermination camps, executioners eliminating heinously more than one thousand people a year.
- 2) They operate CIA gas chambers, hit teams spraying thousands of people a year with concentrated nerve gases and industrial toxic gases.
- 3) They operate labor camps of sadism and sodomy, hit teams massdrugging tens of millions of people a year.
- 4) They operate labor camps of behavior manipulation and enslavement, hit teams massdrugging tens of thousands of people a year.
- 5) They operate labor camps of subversion and corruption, promoting massive, clandestine human rights violations around the world.
- 6) They operate medical dissection camps, hit teams field testing new classes of toxins like gene altering agents on tens of thousands of people a year.
- 7) They operate labor camps of deception and perfidy, recording in total information control tens of billions of conversations, documents, e-mails, brain wave patterns, genetic fingerprints by electronic means per day.
- 8) Propagating the total lie, in the name of humanity, the private, independent defence leagues like all government parties suppress the publication of the unleashing of multiple, uncontrolled dangers of the extinction of mankind.

A policy planning committee of a major power's national security council states the security and secret policy goals, for example technological superiority of military forces and intelligence agencies with aggressive weapon R&D programs, a monopoly in key security technologies, a global control structure over all major R&D programs, a credible deterrence with ABC weapons and overkill stockpiles, global presence of forces, massive use of force doctrine; control over political, economic, sociological processes with total information control, manipulation of individual psychological profiles and in planning of demographic structures. Medium term policy goals for the military and intelligence agencies are worked out and coordinated.

Priority of security planning over general, public interests, as those find a balance in democratic processes through public discussion of the issues, is achieved through representation in all departments of the executive, security committees of the legislative, policy panels of the political parties, lobbying groups in political non-profit organizations, public relation campaigns for justification of the security apparatus, armament programs and military doctrines, a policy of national security in all facets of life and active information control with elimination of dissidents.

Present day government and private active information control, image fascism, encompasses preservation of public images like a constitutional framework, point censorship of the press and oversight agencies, manipulation of the population by clandestine, technological means, establishment of a high degree of political uniformity, consuming, non-questioning, non-probing conformity. A population remains in its political behavior illusions bound and image guided as it is bare of convictions, reason, real life experience and ethics.

The high tech power centers of the intelligence and security agencies develop the tools of clandestine high tech terror out of an array of large scale research programs, mainly in misuse of physics, chemistry, biology, genetics, medicine, computer sciences. Crime out of the most advanced technology corrupts in first line basic human living conditions as it cannot be perceived by the senses, the very small, the very distant, the difficult to detect. New classes of toxins, their technology the 'key to power' in this century, manipulating neurological and underlying genetic functions, attack man's inner freedoms of thought and movement.

The high tech power center supervises the production lines of the toxins and poison pellet delivery systems, a global network of operatives, a global satellite tele-communication and surveillance system, logistics and covered operations. The data gathered are stored and evaluated by high capacity data processing equipment. The data are if necessary deciphered and translated, machine scanned for cue words, in first analysis checked in respect to significance, credibility, political concept, military, scientific, technological, economic, financial, sociological interest and passed on to the special departments.

Poison pellets, microscopically tiny toxic pellets in gelatine skin and tiny listening and video devices and bio-chemical-electronic sensors are produced by the millions in a process of microchip precision engineering. As depot poison pellets with an effective range of about 30 feet, they are spun off several times out of multiple layers of equally tiny, hair like pneumatic guns. Placed by an undercover agent on a selected carrier, for example an unknowing person or any object of daily life or a drink water reservoir or any stage of the food chain or a space based gliding probe - flying drone device, they are channeled electronically path monitored into the vicinity or into the body of the target and shot in. They are applied targeted and randomly, single and large scale, in closed and open mediums, contained and epidemically, preparatory and acute and are set off electronically, time locked, by a preprogrammed code signal or within body tissue by sound or voice or toxin concentration or neurological process recognition. Chemically of high purity, toxins of less than one milligram cause an incisive effect on the human body.

The security agencies of the western powers enforce for example political conformity in their respective countries in division of labor. The CIA/FBI, the British and French Secret Service and the German BND keep under surveillance all government personnel, within the population at large students, pursuing higher education, all groups, perceived as dissidents and fringe groups like people advocating closer oversight over the security agencies, sympathizers of and defectors from opposite ideological camps. Military intelligence and counter intelligence of NATO enforce political conformity of all military personnel, within the population at large of groups like antiwar activists, pacifists, draft resisters, drop outs from boot camp for second thoughts. The security organizations of predominant western industries ensure political conformity of all management personnel and channel within the population at large work ethics and economic behavior.

The independent defence leagues and a coalition of the larger and the majority of smaller Third World Countries, supported by Russia, have increased the size of the system of labor camps by several magnitudes, attacking in first line the personnel of foreign government security agencies, of competing and oppositional private security services, as a political - economic weapon foreign populations at large (5) and dissidents within their own population. Main political goals are predominance in all tools of clandestine high tech terror (6) and suppression of any attempt towards publication of clandestine undercover methods (8).

1) There is not one major security agency around the world that does not have its killing fields. Also the military security department of NATO operates an assassination squad to eliminate foreign agents, who penetrate vital security areas, traitors, who sell security related information, deserters, who are caught up with behind hostile lines, security risks, who threaten to impair security operations, critics of military and secret policy goals, who become a formidable voice in public, whistle blowers of internal corruption affairs.

The assassinations are priority operations, well organized and quiet. A small intelligence court reviews the evidence, the target is pumped up with depot poison pellets, isolated geographically, usually dispatched to a remote area, death follows in a break down or an accident, a death certificate is issued, citing an apparent natural cause of death. Where isolation of the target is not possible, a terminal disease like cancer is planted with depot poison pellets.

Uncovered operatives of an oppositional intelligence service and their double agents within own security agencies for example by NATO are hung at a remote station in the basement by backwards crossed arms over a wall urinal to be tortured by mechanical, electrical and bio-chemical means like CIA psycho and sodomy drugs for 2 - 8 days. The victim is dead, when all body fluids stopped dripping.

2) For CIA gas chambers targeted are mainly groups, which are perceived as dissidents, for example the leadership of an oppositional movement. The nerve gases employed attack specific functions of the central nervous system, wake awareness, memory, concentration, reaction, balance, coordination and the peripheral nervous system to cause loss of physical power and endurance, agility, flexibility, sensitivity in the limbs. From industrial toxic gases often chosen are carcinogens, affecting first the pulmonary system, reducing physiological functions and inducing tumoral growth in the long term. In debasement of the dignity of man with his spiritual gifts, crippled are the intellectual und physical strengths to the point of disability to perform tasks of every day life.

From cartridges gassed are entire streets, public places and buildings, trains, busses, cars, restaurants, assembly halls and in soluble forms or floating as pellets the water of public pools. Nerve gas pellets are attached to any object of daily life like newspapers or packaging, the electronic set off signal timed for maximum toxic concentration at time of exposure. The target's home is laced mostly with by odor imperceptible dosages for long term effects, if not the bedroom itself is used as death chamber. H. Kohl und B. Netanjahu operated CIA gas chambers in churches and at the sites of former Nazi concentration camps.

3) Targeted for labor camps of sadism and sodomy are mostly groups perceived as dissidents, activists, non-conformists, dropouts and fringe groups of society like human rights activists, especially in defence of unpopular causes, critical voices of the political system, especially of government institutions, the press and free market, radical groups of minorities or prisoners convicted for a heinous crime. In chemical rape, while the target's mental, motivational and emotional capacities are reduced by blocking agents, a variety of CIA sodomy drugs manipulate in succession sexual drive, erotic sensations, emotional and physical feeling, sensibility of genital parts, secretion of sweat glands, speed, endurance, exhaustion, sleep, dream, hangover. Drug induced fixed mental images of perversity acts direct behavior, while erotic stimulants have often been individually designed according to previously taken brain wave patterns. Poison pellets shot into the genitals lead to tumorous growth. The offspring is being monitored in its mental and physical development.

In psychological terror the mental functions of intention, conception and reflection are reduced and distorted, in their coordination severed and motivational and emotional drives reduced to the point of non-resistance against adversities and one's own personality collapse. Induced is every emotion from despair to blind hope and from depression, anger, irritation to insensitivity, contentedness, elation, from fear to boldness and loss of conscience. Often several neurological processes are stimulated periodically to extremes not to allow relaxation. Function specific toxins block abstract reasoning, cause language blackout, computation blackout, manipulate singular mental interests, or induce a 'joy of death frenzy', supplanting every agony of torture. Stimulation towards 'blasphemy of the Holy Spirit' is achieved by boosters of fixed, eccentric theological ideas and a desire to communicate. In all the target's personal development, identity, character, especially its political convictions and ethical standards, are debased and suffocated in the suds of prostitution. The victim, often with a depot poison pellet induced, creeping disease, is in its professional work blocked, on the social level isolated, disenfranchised, welfare and family safety nets are ripped. It is to die on the streets.

Hit teams mass drug entire water and food supplies for years from the start of the food chain to the selected target, in the food processing industry, at distributors, supermarkets, restaurants, in the target's home, in transport going through a repackaging facility. Contaminated with toxins, taken up with skin contact, are object of daily life like hygiene articles, kitchen tools, clothing directly or via dryers.

Labor camps of sadism and sodomy have been set up around the world, blanketed with sodomy drugs are entire regions, ethnic groups and political fractions like the supporters of General Noriega after the invasion of Panama by US troops in 1989.

4) In labor camps of behavior manipulation and enslavement, in first place individual behavior is suppressed or stimulated in its elementary physical needs, in sleep and exercise requirements, appetite and thirst, hygiene and beauty care. In second place the emotional state is manipulated from thrift to the urge to go shopping and from stress, frustration, spite to the desire to achieve social recognition, to be in charge, up to power madness. In third place affected is motivation, capped or boosted into go-on efforts in face of exhaustion or failure. In forth place intellectual interests are selectively stimulated or reduced, while mental and ethical awareness are dampened. The toxins are administered predominantly in small dosages, depot time released to cause habit forming, long term economic behavior patterns.

Social behavior like cooperation in teams, groups, hierarchical structures and manners of communication is manipulated out of the emotional state from diffidence to hostility, out of channeled motivation from dropping out to intriguing or through inducement of nervousness or through disruption of fine motoric in gestures or impairment of the vocal cords. In all the target's physical fitness, personal development, education, professional and social careers are pre-determined.

5) Labor camps of subversion and corruption are set up in foreign countries. With friendly allies, who are regarded as reliable political partners, mutual interests are regulated by bi- and multi-lateral cooperation agreements. However, a government intelligence agency promotes its secret policy goals in any nation through direct leverage for promotion of political influence and military security interests, fragmentation of political alliances, access to open markets and free flow of information, subversion and corruption of the foreign political-social structure by manipulation of the public press and inhibition of independent development of vital scientific, technological, economic and financial bases, wash out of cultural identity, in all dominance in an unequal balance of forces in resources, scale, location and relations with one-sided dependencies.

The intelligence, counter intelligence and security agencies' operational resources are scaled up to the required size to realize their secret policy directives. They employ official contacts, manipulation, forgery, theft, bribery, extortion, recruitment, counseling, financial sponsoring, partnerships, take-overs, supported by home based intelligence analyses. Sold are proprietary information, low cost credits, logistical supplies, user rights, telecommunication systems, special technologies, tools of clandestine high tech terror. Their first tool always remains the covered operation with information gathering, hit and sabotage teams and a system of labor camps to control the broad base of the population.

6) Selected as guinea pigs for pseudo-medical experiments are tenacious dissidents for punitive action, captured freedom fighters, perceived as terrorists, minorities in technological underdeveloped areas, uprooted individuals, loose pray, suicidal persons, the dying in nursing homes and intensive care wards. Tested are new classes of toxins in single and mass applications by medium, path and speed of epidemic spread, in real action simulations statistical samples are taken from the population. The toxins are screened for their anatomical, physiological, psychological effects on the human body, selectivity of a specific structure or bio-chemical function, dosages, incubation times, side effects, codetermining factors, counter poisons, recuperation times and traceability.

Hit teams plant the toxins and a series of bio-chemical sensors with a suitable carrier or with depot poison pellets in the body of the victim, the skull, organs, glands, muscles, skin, digestive tract and all parts of the male or female reproductive system. The victim's environment is wired up with illegal listening and video devices. The data are collected via external amplifier and satellite directly at the security agency's high tech power center for evaluation. In each case the death certificate shows an apparent natural cause of death. For example the Governments of France and Israel developed their nerve gas programs with test series on FLN and Palestinian freedom fighters, taken prisoners, - none survived and their ashes were scattered over the desert.

In a global fornication race to gain predominance in all tools of clandestine high tech terror, the major powers' intelligence and security agencies press ahead with the development of bio-chemical mutagenic, hybridization and recombinant DNA technologies. Direct incision into human hereditary dispositions in the common gene pool are to improve the present state of the art techniques of behavior channeling by efficiency, not symptoms but cause attacking, by complete coverage of regions and groups with stable, lasting results, transferring altered genetic strains to succeeding generations and by economy with centralized supervision of a lean network of undercover operatives.

Aimed at are four levels of incision: death of the target through disablement of a vital function or through a morphological malformation; invalidity or disease through a mostly temporal, local, graded manipulation of a physiological, often neurological function; change in the level of a physiological, often neurological capacity; altered growth and differentiation of a specific capacity, mainly to predetermine the psychological profile.

Aimed at is predictable behavior programming through bio-chemical DNA manipulations, following mainly 6a) political, 6b) military, 6c) economic, 6d) sociological, 6e) demographic criteria:

6a) Political criteria: A major power's national security council states the secret policy goal, control of all political-sociological processes and individual psychological profiles by manipulation of neurological and genetic processes to render them within preset parameters long term planable and short term correctible. Population genetics with bio-chemical strain manipulations is employed as rational, 'scientific' tool to model a population's allele composition. In a systematic, clandestine, monitored process of repetitively cataloguing and correcting incisions, every individual of the target group is subject to strain manipulations. The allele distribution of the common gene pool is tailored to a designed structure and frequency by means of introduction of desired and modification or elimination of undesired dominant and recessive traits. Individuals with genodeviant, 'substandard' traits are eliminated.

6b) Military criteria: According to the US and NATO secret policy goal of technological superiority in all weapon categories, aimed at are the construction and peace time deployment of the first 'biological bomb'. Its first stage comprises the genetic identification, marking and tracking of every single individual in every country by a network of undercover operatives and a satellite surveillance system. In the second stage every single individual is pumped up with genome altering agents by clandestinely, pneumatically shot in depot poison pellets, equally by manual and electronic means. The third stage, an electronic set off mechanism, furnishes the capability of single and mass applications with selection of targets, grading of damages, fixing of place, time and path of execution. The deployment structure comprises also a depot system of bio tech weapons, placement of toxin locked capsules in water and food supplies and at high traffic locations and space based gliding probe - flying drone devices.

6c) Economic criteria: The economic structure is to be manipulated population wide mainly through individual basic needs and motivation channeled behavior patterns to control the key economic indicators of net domestic product by kind of economic activity, private investments and consumption expenditures, net savings, corporate and labor force structures, adherence to labor peace, work ethics and productivity.

6d) Sociological criteria: The social structure, especially the wider technological elite, is to be predetermined mainly through manipulation of basic traits of intellectual interests and capabilities as well as motivation, emotional state and sexual behavior, channeling each person's personal development, education, identity, character, professional and social careers.

6e) Demographic criteria: Genetic incisions, leading to individual imbalances, impairments, diseases, disabilities or death, affect directly the general health and touch in their consequences all aspects of health standards, care and insurance. The rates of still born, life birth, infant mortality, disease, invalidity and death according to causes determine key population parameters, base of and leverage on social and economic structures, like population size, local population density, age group distribution, growth trends and further statistics like average work years, retirement age and life expectancy. As indicators of general health according to registered causes and external factors like migration or environmental effects they have become insignificant.

Genetic incisions affect directly the anatomy and physiology of an organism. Primarily manipulated is an elementary trait, where the phenotype with an hereditary, morphological or functional distinction is traceable to a specific genotype and the individual gene or gene group as functional unit is identified and described with its bio-synthetic pathway. Massive, population wide genetic manipulations affect in first line the demographic structure. Genetic incisions to fix a specific trait in the general psychological profile stably, continuously, time effectively, will result due to the large number of variables, interdependencies and codetermining factors in an almost irreversible shift of frame in several allele frequencies of the common gene pool with world population encompassing uncontrollable, catastrophic side effects.

7) In the project 'total information control' operatives funnel illegal listening and video devices into every household in the world, on every continent, into every public place, institution, workplace, workstation, phone, car to monitor the worldwide information flow in its entirety. Every young adult is wired up to pursue him in all his prayers, travels, intellectual and social activities throughout all phases of the day, exceeding a span of over sixty years up to the time of his demise. Brain wave patterns are recorded in the language controlling section of the brain to decipher his thinking. First priority in a labor camp of deception and perfidy is the establishment of a gapless early warning system against security threats, to cut short incisively any arising attempt towards publication of the employment of illegal listening devices or of a target's medical or legal evidence. Equally, disadvantageous issues in public discussion are defused and eliminated and entire political issues with their ramifications are removed from public awareness. As facades of the clandestine, constitutional revolution are held up public images, political, scientific, economic, social illusions like a constitutional framework, basic freedoms, a welfare image of all government institutions, mastery of nature, sustainable, global economic progress, a way by reason alone to lead to universality of arbitration, in all illusions of human capabilities and convenience. Image fascism established, topped in deception, pretended are hypocritical ethical standards like application of rationality in all aspects of life, public discussion of all issues with democratic mechanisms of conflict solving, raising of educational standards and of the general public health.

8) Several private, independent, defence leagues claimed to clean up these crimes with establishment of internationally guaranteed safeguards against misuses of modern bio-technologies. In hypocritical perversion they do the opposite. Their sole motivation sodomitic cynicism, they escalated their investigations into these crimes into a global, dirty war between the personnel of all factions, the competing defence leagues, the security agencies of the major, industrialized powers, a coalition of Third World Countries, their populations at large as well as their own. Equally they intensified the fornication race for predominance in all tools of clandestine high tech terror. They tolerate the government security agencies' strategic planning, administrative tasks, R&D programs, field testing, toxic drug production lines, communication, surveillance, stockpiling, distribution, networks of operatives, mass application and their continued secret financing. They retrieve their technological know how, plunder stockpiles, shipments, operational systems to employ the widest variety of psycho and sodomy drugs and test any new, experimental drug directly on populations at large. They copied the high tech power centers to secure themselves privately through total information control, electronic screening and bestial deterrence. They multiplied to several hundred groups, terrorist organizations according to German law (§ 129a StGB), supervising today the largest system of extermination and labor camps. Their executioners sodomize their adopted targets in psychological terror to death, mostly under the perversity labels of direct, effective help or emergency medical care for victims with anonymously shot in poison pellets.

The independent defence leagues, having suppressed the publication of clandestine high tech terror since the first investigations, a breeding ground for image fascism and despotic perversion, in consequence through the stages of subversion, corruption, fornication, proliferation, escalation, have fostered these crimes against mankind to shoot into gigantic proportions. The process has been stirred up by hate as an incitement to commit any sodomitic bestiality conceivable. Suffocated in the suds of prostitution are the integrities of truth and life, basis for the dignity of man and universal principles of unity and equality of mankind, also constitution bound governments and civilization worldwide. In the outgoing decade of the last century, corruption, fornication and extinction of mankind have become the predominant forces of history.

Yours Sincerely

Udo Frentzen
